Dear Lesley

As a skeptic by nature I wanted to try your Joint Rescue on one of my own horses first to convince myself of its efficacy before I recommended it to my clients so I gave it to a twenty year-old Thoroughbred mare who has chips in her fetlocks from her racing days, participated in trials that involved fast work on a treadmill at the Equine Research Centre in Onderstepoort and evented and showed successfully until the age of 15. She was retired from competition because of unsoundness and has been quite stiff ever since, especially in the morning. I started her on 20g a day and thought I saw an improvement on day 8. By day 14 I was convinced that the product definitely works! She has not walked out of the stable in the morning this well since she was 14 and I really should consider hacking her out again – if only I had the time!

The product has everything a nutraceutical for joint health should contain and the very reasonable price is a bonus. I will be more than happy to recommend Joint Rescue to any of my clients as a preventative and as part of an arthritis management plan as well as stock it in my practice.

Thank you for introducing me to a great product!

Kind regards,
Dr Karen Böhme
